

From Development to Delivery

One source for all your packaging needs.

Whatever your business or product, you need a way to contain it, store it, protect it, and ship it.

What you need, rather than a stockroom full of cartons, is a system of packaging which involves evaluating the entire process, not just elements of it.

APS is a company that sees the whole package. We want to design a program that meets your needs and requirements.

We can do it for you at a price you will like...

We can do it for you fast...

We can customize your package and make it look great!

Where Service is Always #1

As a leader in our industry, APS is committed to the best in unique packaging, customer service, and competitive pricing. We are located in Silicon Valley and have earned a reputation as top professionals in packaging.

Packaging is our business. We started selling paper products in 1977. We have found that a well-designed packaging system, customized to an individual's needs, is the essential rather than an incidental service to our customers.

Satisfying all of your packaging needs is our primary concern. Our experienced team of sales personnel, in-house technicians, and designers are prepared to work with you to determine what will best meet your requirements.

Get the lead on your competition by depending on APS for all your packaging needs.

Service

Solution Designed **Packaging**

Although Advance Paper Systems (APS) offers a full line of standard products, *our primary commitment is carrying out a customized packaging system.* This system is tailored to the individual and unique needs of each customer.

Just as no two companies are alike nor their products identical, no two packaging designs can be handled or applied in exactly the same way. We understand that standard packaging products may not always meet your needs. APS custom packaging consists of corrugated, foam, cushioning, barriers, or combinations of these — all designed and engineered to provide your products with maximum protection, aesthetic value, convenience, and economy while retaining your business identity.

We Know What Works...

From high-tech to specialty food, our experience spans many industries. We can also handle your specifications for precision instruments and provide *recycled packaging* for environmental concerns.

Stock and Custom **Packing Materials**

To complete your packaging requirements, APS offers you everything you need for the shipping room in both stock and customized packaging products.

Standard corrugated cartons solve packaging problems by saving time in delivery, tooling expenses, setup costs and warehousing. We can approach your needs with a true **Just In Time** delivery service. This means guaranteed *delivery the same or next day*. APS operates as a fast and flexible company.

APS has thousands of standard cartons in white, kraft, and now a complete line of recycled cartons.

Call for Product Pricing and Delivery

Static Control **Products**

APS safeguards your sensitive electronic components from shock, vibration and static charges.

Anti-static

Anti-static material has the ability to resist triboelectric generation of a static charge.

It does not refer to a resistance range, but the property of the material itself and the materials with which it may have been in contact.

Shielding

Electrostatic shielding materials are capable of redirecting an electro-static field, so that its effect does not reach the stored or contained items to produce damage.

Conductive Corrugated

A conductive container has the ability to conduct an electric or static charge. In essence the container has the capacity to redirect the charge.

It can be made into a regular RSC container or as removable partitions and liners. It also can be a dust-free coated surface.

Packaging

- Anti-Static Bags
- Bubble Cushioning
- Conductive Containers
- Foam Cushioning
- Totes
- Part Bins & Tote Trays
